                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 NOTE: This is a 'working draft' sequence. It currently consists of 37 contigs. The true order of the pieces is not known and their order in this sequence record is
                                                                                                                                                                                                                                                                                                                                                                                                    Center: Whitehead Institute/ MIT Center for Genome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1037 136: gap of 100 bp in length 1137 2213: gap of 100 bp 2214 2313: gap of 100 bp 2214 2313: gap of 100 bp 2314 3566: contig of 1253 bp in length 3567 3666: gap of 100 bp 4905 4904: gap of 100 bp 6405 6504: gap of 100 bp 6405 6504: gap of 100 bp 6505 8366: contig of 1862 bp in length 6805 8366: contig of 1862 bp in length 6305 8366: contig of 1862 bp in length 100 bp 6505 8366: contig of 1862 bp in length 100 bp

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

cancer of o u numunogenic portion of monitoring progression c an e comprising detecting an Isolated polypeptide protein is used for d patient ಠ ţ

261pp; English 184-186; Page 1a; Claim

This invention describes a novel isolated polypeptide (I) which comportising an immunogenic portion of a lung tumor protein or variant (P2) which have cytostatic activity. The polypeptides and polyncleorides are used in compositions and vaccines to inhibit the development of cancer, especially lung cancer, in a patient. Methods described in the invention and beaution at subsequent time points and comparing the results from the different time points. CD4+ and/or CD8+ T-Cells isolated from a patient cells expressing P2 and then administered to the patient to inhibit

The present sequence represents a cancer associated antigen gene designated MCC-1. The specification also describes a cancer associated antigen designated CT7. The CT7 polynucleotide was isolated from antigen designated CT7. The CT7 polynucleotide was isolated from SK-MEL-37 melanoma cells. The polypeptide has some homology with MAGE-10, infinited to about 210 carboxy terminal amino acids. The amino terminal of the protein has a repetitive pattern, with repeats rich in SK-MID-10 for a serine, proline, glutamine and leucine, and an almost invariable core of the peptide given in AAV33877. The CT7 polypeptide can be processed to peptides which provoke lysis by cytolytic T cells. The polynucleotides and polypeptides can be used for treating a cancerous condition and screening for or diagnosing cancerous conditions. The cancer associated antigens can be used as an immunogenic or vaccine composition with an equivant, e.g. a cytokine, a saponin, or granulocyte macrophage-colony estimulating factor (GM-CSF).

This invention describes a novel isolated polypeptide (I) which comprising an immunogenic portion of a lung tumor protein or variant (P2) which have cytostatic activity. The polypeptides and polynucleotides are used in compositions and vaccines to inhibit the development of cancer, especially lung cancer, in a patient. Methods described in the invention can be used to monitor the progression of a cancer by carrying out the detection at subsequent time points and comparing the results from the different time points. CD4+ and/or CD8+ T-Cells isolated from a patient are treated with P2, polynucleotides encoding P2 or antigen presenting cells expressing P2 and then administered to the patient to inhibit
                                                                                                                                                                                                                                                                                                                                                                                   cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               550

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence encodes a murine c-myc coding region determinant binding protein (CRD-BP). The presence or absence of a tumor can be determined by determining the levels of CRD-BP present in the suspect tissue, where the CRD-BP shields c-myc RNA from endonucleolytic attack and so prolongs its half-life. The methods are used for diagnosing presence or absence of a tumor in a human, especially breast, colon and pencreatic cancer. They are also used to inhibit cancer cell

The present sequence represents a cancer associated antigen gene designated KCC-3. The Specification also describes a cancer associated antigen designated CT7. The CT7 polynucleotide was isolated from sk-mEL-37 melanoma cells. The polynucleotide was isolated from K-mEL-37 melanoma cells. The polyneptide has some homology with K-mEL-37 melanoma cells. The polypeptide has some homology with carminal of the protein has a repetitive pattern, with repeats rich in serine, proline, glutamine and leucine, and an almost invariable core of the peptide given in AAY4387. The CT7 polypeptide can be processed to peptides which provoke lysis by cytolytic T cells. The purcleotides and polypeptides can be used for treating a cancerous condition and screening for or diagnosing cancerous conditions. The cancer associated antigens can be used as an immunogenic or vaccine composition with an adjuvant, e.g. a cytokine, a saponin, or granulocyte macrophage-colony 55; Page 41; 44pp; English $\overset{\mathcal{A}}{\times}\overset{\times}{\times}\overset{\circ}{\circ}{\circ}\overset{\circ}{\circ}\overset$

                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence represents an alternative form of a cancer associated antigen gene designated RCC-3. The specification also describes a cancer associated antigen designated CT7. The CT7 describes a cancer associated from RK-MEL-37 melanoma cells. The polynucleotide was isolated from RK-MEL-37 melanoma cells. The polypeptide has some homology with MAGE-10, limited to about 210 carboxy terminal amino acids. The amino terminal of the protein has a repetitive pattern, with repeats rich in serine, proline, glutamine and leucine, and an almost invariable core of the peptide given in AAV48877. The CT7 polypeptide can be processed to peptides which provoke lysis by cytolytic 7 cells. The polynucleotides and polypeptides can be used for treating a cancerous condition and screening for or diagnosing cancerous conditions. The cancer associated antigens can be used as an immunogenic or vaccine composition with an adjuvant, e.g. a cytokine, a saponin, or granulocyte macrophage-colony stimulating factor (GM-CSF).

The present sequence represents an alternative form of a cancer associated antigen gene designated RCC-2. The specification also associated antigen gene designated CT7. The CT7 plustible a cancer associated antigen designated CT7. The CT7 polynucleotide was isolated from SK-MEL-37 melanoma cells. The CT7 polypeptide has some homology with MAGE-10, limited to about 210 carboxy terminal amino acids. The amino terminal of the protein has a repetitive pattern, with repeats rich in serine, proline, glutamine and leucine, and an almost invariable core of the peptide given in AAY48877. The CT7 polypeptide can be processed to peptides which provoke lysis by cytolytic T cells. The polynucleotides and polypeptides can be used for treating a cancerous condition and screening for or diagnosing cancerous conditions. The cancer associated antigens can be used as an immunogenic or vaccine composition with an adjuvant, e.g. a cytokine, a saponin, or granulocyte macrophage-colony stimulating factor (GM-CSF).

The specification also describes a cancer antigen designated CT7. The CT7 polyhucleotide was isolated SK-WEL-37 melanoma cells. The polypeptide has some homology MAGE-10, limited to about 210 carboxy terminal amino acids.

terminal of the protein has a repetitive pattern, with repeats rich in serine, proline, glutamine and leucine, and an almost invariable core of the peptide given in AAV43877. The CT7 polypeptide can be processed to peptides which provoke lysis by cytolytic T cells. The polynucleotides and polypeptides can be used for treating a cancerous condition and sorreening for or diagnossing cancerous conditions. The cancer associated antigens can be used as an immunogenic or vaccine composition with an adjuvant, e.g. a cytokine, a saponin, or granulocyte macrophage-colony
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1011

                                        cancer
cells or antigen presenting cells for use in the treatment of lung cancer. The polypeptides and monoclonal antibodies specific for the polypeptides can also be used to inhibit the development of lung cancer. Agents which bind the polypeptides can be used for detecting lung cancer and for monitoring the progression of lung cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 cytostatic;

                                                                                                                                                                                                                                          This invention describes a novel isolated polypeptide (I) which comprising an immunogenic portion of a lung tumor protein or variant (P2) which have cytostatic activity. The polypeptides and polynucleotides are used in compositions and vaccines to inhibit the development of cancer, especially lung cancer, in a patient. Methods described in the invention can be used to monitor the progression of a cancer by carrying out the detection at subsequent time points and comparing the results from the different time points. CD4+ and/or CD8+ T-cells isolated from a patient are treated with P2, polynucleotides encoding P2 or antigen presenting cells expressing P2 and then administered to the patient to inhibit
                                                                                                                                                                    Isolated polypeptide comprising an immunogenic portion of a lung tumor protein is used for detecting and monitoring progression of lung cancer in a patient \cdot

The present sequence is one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. No ORF has yet been conclusively identified within the present sequence. The 5' ESTs were prepared from identified within the present sequence. The 5' ESTs were prepared from cotal human RNAs or polyA+ RNAS derived from 30 different tissues. ESTs sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences consistences have been obtained, the full 5' UTR is rarely included. S' ESTs are derived from mRNAs with intext 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forenisic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion vectors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    5

The present sequence is one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of human genetic disorders.

The present sequence is one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful
                                                                                                                                                                                                   Probe #12084 used to measure gene expression in human placenta sample.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          668
                                                                                                                                                                                                                                                                                The present invention relates to a composition comprising two nucleic acids each containing an electron-transfer group (ETM) having different redox potentials. The invention is used for electronic detection of nucleic acids, especially of substitutions (mismatches) and single-nucleotide polymorphisms, e.g. for genotyping, monitoring gene expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               EDNA library was prepared and sequenced in Mouse Genome
Encyclopedia Project of Genome Exploration Research Group in Riken
Genomic Sciences Center and Genome Science Laboratory in RIKEN.
Division of Experimental Animal Research in Riken contributed to
prepare mouse tissues. First strand cDNA was primed with a primer
[5, GAGAGAGAGATCCAAGAGCTCTTTTTTTTTTTTTTVN 3'], cDNA was
prepared by using trebalose thermo-activated reverse transcriptase
and subsequently enriched for full-length by cap-trapper. cDNA went
through one round of normalization to Rot = 7.5 and subtraction to
Rot = 37.5. Second strand cDNA was prepared with the primer adapter
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  TVNELQSLSSAEVVVPRDQTPDENDQVVVKITGHFYACQVAQRKIQEILTQVKQHQQQ
